Number 34

Enlarging The Dominion Glass Office Department

Office Being Enlarged For Increasing Business

Big improvements are under way in the office department of the Dominion Glass plant here. The office is being enlarged by ten feet wider to allow for more convenience and space for the office staff which is also increasing. This space is taken off the machine shop and a new office is being built for the superintendent of that department.

When completed there will be a big improvement in the appearance and convenience of this section of the plant.

Business in connection with this factory has been increasing which has required improvements and enlargements in the departments for the past several years and the plant has been kept in operation for 24 hours a day in order to keep up with orders for their ware.

Use of Russian Thistle Is For Feed or Pasture

So Suggests Officials From Manyberries Station

Dominion Range Experiment Station at Manyberries, advises farmers of the drouth districts to give attention to securing substitute feeds to combat the feed shortage problem.

Russian thistle is suggested as a substitute and should be sown in the spring. It is a very high yielding plant, low in fiber and high in content, indicating considerable feed value. During the early flowering period it is the best stage for cutting as the nutritive value is the highest and the plants are comparatively easy to handle. If it is cut in a fairly mature and in the peak stage it will make good feed providing it is processed and used as ground roughage.

A high content of alkalies scouring and necessitates care in feeding if good results are to be obtained. The thistle should be mixed with one half dry roughage such as wheat straw.

When Russian thistle is very thick and short it is desirable to use the spring tooth cultivator or spring tooth harrow to thin it out.

How Is Your Subscription?

Citizens of Redcliff:

You are about to make a decision whether to install in your home the great labour and health saving service—Electricity—Naturally you ask what it is going to cost for wiring my house? We quote a fair average for wiring a cottage of two Bed Rooms, Living, Dining, Kitchen, Bath and Basement, which would consist of Seven Lights, Five Switches and Two Convenience Outlets for the sum of \$30.00. This is a Complete Job with Lamps and Fittings.

We are the only Fully Licensed Electrical Contractors in the City with both Provincial and City License, and employ only experienced men. We also offer you a full line General Electric Appliances.

Time Payment can be arranged on both work and appliances. Estimates Free

'Larry' Cahoon Passed Away Last Sunday

Relapse Caused Severe Attack of Pneumonia

Mr. James Lawrence Cahoon who was familiarly known as "Larry" passed away in the Medicine Hat hospital last Sunday morning.

Deceased had a serious illness early last spring but recovered enough to get around again but about a month ago he took a relapse with a serious attack of pneumonia. Because of a weakened condition he could not withstand the relapse and gradually grew weaker.

The late Mr. Cahoon farmed in the Bowdell district for a number of years but moved to town several years ago when he secured the contract for carrying the mail from the station to the post office.

The funeral took place from St. Patrick's church Medicine Hat, on Wednesday morning, and his remains were interred in the Roman Catholic cemetery.

Deceased who was 76 years of age was a kindly gentleman and was highly respected by the young and old. He is survived by his wife to whom sincere sympathy is extended by their many friends.

In the Hanna district which is up against a complete crop failure much the same as around here, farmers met and passed resolutions asking the federal and provincial governments to co-operate that wages be introduced as a substitute for direct relief, and provide some permanent solution to their climatic difficulties. The meeting also requested that both governments and the farmers co-operate in order to supply potatoes and vegetables as soon as available, a way of direct relief to those in need, and be sold at cost to those able to pay.

Mr. J. Hope left last weekend for Victoria B.C. where he will visit friends for the summer.

Terrific Wind Storm Here Last Evening

Considerable Damage Was Done Around Town

Considerable damage was done around town last evening when a terrific wind storm from the north swept over the district for about an hour. For a time it looked very serious as damage was flying in all directions and buildings shook.

The roofs were blown off the stable at the rear of Gust's store and a town building opposite the hotel, and a telephone pole just behind the Review office was blown down. Large branches of trees were torn off and garden stuffs were badly scattered about.

Reports from all directions indicate that considerable damage was done over a large area in all directions.

Gordon Memorial Had S. S. Picnic Monday

Was Held at Central Park, Medicine Hat

One of the largest crowds of children, young people and parents and friends, attended on Monday the annual Sunday school picnic of Gordon Memorial church, held in Central Park, Medicine Hat. A number of interesting sport events were participated in by the children and young people, and many money prizes were given for cream and a very enjoyable lunch ended the pleasant day.

Irene Weiss of Medicine Hat was drowned in the river at Police Point last Tuesday morning. She and her sister, Katie, were walking across a foot bridge when a shallow pool they thought was a shallow pool but when they came to the other side Irene was carried away by the current. Parents are warning the river.

Mr. R. B. Gardner, president of the U.F.A. has been holding a series of meetings in the south section of the province and reports that the U.F.A. decidedly on the upgrade.

Sport Night at Swimming Pool Friday, July 30

Arrangements are now being made for a program of aquatic sports at the swimming pool on Friday evening July 30th.

As the committee is endeavoring to raise enough funds this season to be able to erect a new pool for next year, it is hoped there will be a large attendance at the sports and a good collection taken in.

Amateur events of swimming diving and standing for all ages will be arranged and it is expected that all will take part. Good prizes will be given for all events.

The program will commence about 8:30. Don't miss the event and all be on time.

HON. R. B. BENNETT

Who has returned to Canada from the Coronation and is much improved in health, at this moment he will act as the leader of the Coronation party, at the coming meeting.

Mr. and Mrs. G. Moore and family, who have been holidaying at Lanf for two weeks, returned home last Friday.

The bridge over the river at Bonanza on the way to Verulam, was destroyed by fire at the east end last Sunday night.

Young Redcliff Couple Wedded Last Saturday

Sklidmore - Johns

A quiet wedding took place at St. Ambrose church last Saturday afternoon when Miss Mary Sklidmore, Nellie, daughter of Mr. and Mrs. Kestly Johnson, was united in wedlock to Mr. James F. Johns, second son of Mr. Sklidmore. Rev. H. S. Hammet officiated.

The bride was becomingly dressed in ivory satin with a long bridal veil and carried a bouquet of roses.

Miss Jean Sklidmore, twin sister of the groom, and Miss Edith Collard acted as bridesmaids, the former attired in coral organza and the latter in Green Organza.

After the ceremony the wedding guests repaired to the home of the bride's parents where a dainty wedding breakfast was served and a pleasant afternoon was spent.

The young couple went on a short wedding trip and returned yesterday to their new home in the Arlington district in the west end of town.

The Review joins with their many friends in wishing them a long and happy married life.

Wreath prizes took a five cent stamp in Winnipeg last Tuesday.

M. G. Fitzhenry returned home last week-end after visiting friends at the Pacific coast.

Allen Martin met with a fairly car accident between here and Medicine Hat last Saturday. While on the way down his car got out of control and skidded from side to side until it ran through a wire fence and turned over. He got away all right and a number of cuts and bruises and was taken to the hospital.

On behalf of the coronation committee Rev. H. V. Ellison and Mrs. J. Kitchen visited St. Ambrose Vicarage last Thursday and presented the coronation boys, George, Francis, Richard, Russell, son of Rev. and Mrs. Hammet, with the coronation cup. The cup was suitably inscribed with wording to commemorate the important British coronation.

Foreigners Come To Show Alberta What Should Do

Charts Check Books and Fountains Pens Have Failed

Many citizens of Alberta are now having a bit of cold water sprinkled on their pride when they hear that our local government is sending to United States and the old country for charts to come over to Alberta to show us what we should do. It should not do.

It certainly is a nasty crack in the eye to our fifty odd members of the legislature who were elected to run this province. It is an admission that the fifty odd Social Credit men who, during the election, were guaranteeing to put social order in operation and assuring a donation of \$25.00 a month to every man and woman over 21 years, were carried away by a wild-o-wisp.

During the election S.C. candidates and speakers had checked books, bank books, pencil pens in an effort to convince the public how easy it was to provide food, clothing and shelter and \$25.00 a month to every citizen over 21 years. It is now almost two years since these easy pickings were promised and haven't come yet, except the foreman and the seven-car loads of horses from Ontario will pull us out of this problem.

YOU Share in Canada's Greatest Co-Operative Business

LIFE INSURANCE is the greatest co-operative business in Canada. As a policyholder, YOU are associated with more than 3,500,000 other Canadians in this great enterprise.

Every business day last year Life Insurance Companies in Canada distributed, to Canadian policyholders and beneficiaries, over Half a Million Dollars.

Life Insurance enables YOU to provide financial security for yourself and family. It also benefits the country as a whole through the investment of Life Insurance funds in important public enterprises.

Life Insurance dollars give employment to workers throughout the Dominion. Transportation facilities are extended, highways built, streets paved, schools erected, water, sewage and other necessary works constructed. Life Insurance dollars help to finance the farmer, and bring business to the general store and country merchant.

In the past five years of business depression, Canadian policyholders and beneficiaries received over Eight Hundred Million Dollars in payments from their Life Insurance funds. Life Insurance Companies have fulfilled every obligation one hundred cents on the dollar.

As a policyholder, YOU can take justifiable pride in sharing in this, the greatest co-operative business in Canada.

Building New Industry

Scientists Believe Paper Can Be Made From Southern Pine

Because scientists discovered that the human, suffer from "hardening of the arteries" in old age, Canadian newspaper producers will soon be finding new markets for their output within 10 years, Dr. Carl B. Fritzsche told the Canadian Chemical Association in Vancouver.

The Dearborn, Mich., manager of the Farm Chemicals Company and investigators under Dr. Charles Harty of the Savannah Pulp and Paper Laboratory had succeeded in making high-grade paper from the formerly useless "southern pine."

Experimental runs of paper from southern pine pulp indicated new pulp manufactured from it has as good tensile strength, bleaching and blotting properties as that made from Canadian or Scandinavian spruce. He quoted leading engineers as saying factory cost of the southern pine paper would be less than \$30 a ton.

Behind this is the story of an optimistic scientist. Southern pine could not get rid of the resin or pitch that had made the soft wood useless for paper making.

Dr. Harty, the scientist, finally discovered presence of resin indicated one of two things. Southern pine suffered injury in youth or was afflicted with the hardening of arteries of old age. He decided resin was only natural, pathological remedy for these two afflictions. "If you protect the tree when it is young and cut it before the resin is answered critics, 'resin content will be negligible'."

And on that basis the new southern pine industry is being built.

Treasure In Old Chest

Discovered By Man Who Bought Box At Auction

A locked oak chest, which he bought for three shillings and found to be full of silver, may bring a fortune to J. Nash of Colford, Gloucestershire, England, a young son of a well-to-do farmer and a foreman of Dean, a large owner and dairyman.

The chest was put up for auction at a sale at Clevedon Hall, Trevelick, the effects of Mrs. Bussacott, mother of the late chief constable of Monmouthshire, who died there in 1880.

Antiques, pictures and silver fetched large sums, but only Mr. Nash bid for the tough oak chest, standing three feet high. He thought it might be useful for keeping tools. The key was missing and many days passed before Mr. Nash decided to force it open.

Watched by a little boy friend, he released two locks, raised the lid. Inside was what appeared to be a boy's hair.

He lifted it up. Man and boy gazed at each other in wonder. For the "hair" was a large solid silver mass, covered with a thin layer of hair.

Inside the covers, and fitted into slots lined with purple velvet, Mr. Nash found shining silver sauce spoons, bottle holders, cream jugs and other articles.

The silver, found to weigh more than 40 pounds, dates from the reign of Charles I. It is thought that it may once have belonged to the monarch himself.

New Census Machine

Technicians Make It Make Cross Classification Quite Complete

Technicians in the Dominion Bureau of Statistics have developed a census machine which is the only of census bureaus the world over. Dr. R. H. Coats, Dominion statistician, revealed to the conference on Canadian-American affairs at Kingston.

More elaborate and complete than anything of the sort made commercially, this machine will provide a complete "break-down" of census information, mechanically he said.

"We get a lot of nonsense correlations but we get complete reality," he said. "There is no cross classification we can't secure now from the 1931 census."

Reply received: "Tough-Nut inside lion."

The manufacturer of felt hats in the United States requires more than 30,000,000 rabbit skins every year.

According to scientists all birds have descended from ducks.

U.S. LAUNCHES AN INCOME TAX INVESTIGATION

Committee in session

Sweeping investigation into alleged income tax evasion in the United States on the part of a number of wealthy men was launched by a congressional committee following months of work on the part of treasury officials. Members of the house committee include: Cooper of Tennessee, Vinson of Kentucky, Crouther of New York, and, seated, Thomas Cullen of New York, Doughton of North Carolina, chairman, and Allen Treadwell of Massachusetts.

New Has Endless Varieties

But Ice Cream Originated In China 800 Years Ago

They were clever, those Chinese who developed the original recipe for the winter ice, frozen desserts, and frozen creams. They were probably pointedly amused at Marco Polo, when that famous Italian explorer first visited China about the year 1300, and considered him a barbarian when he expressed astonishment over his first taste of a frozen dessert. That is how old ice cream is!

Marco Polo introduced frozen desserts into Europe on his return, whence we get the celebrated Italian ice cream called "aproniti," which was rife in the frozen desert of Italian apices until Catherine de Medici left the city of Florence to become Queen of France and took with her a special chef to make the frozen desserts she knew she could not obtain in her new home. The Queen's new dessert became the sensation of Paris, then of France, then spread to England across the Channel. French and English colonists brought it to North America.

If you had thought that ice cream was a typically North American dessert, do not be deceived by this discovery that it is at least 800 years old, and originated, so far as we know, in China. Ice cream in its present fascinating varieties, is as North American as the Great Lakes! The mousses, parfaits, frozen puddings, special mixes and design, pastries incorporating ice cream into their formulas, are all contributions of the frozen deserts—Jeanne Marie Deloth.

Problem Becoming Greater

Preserving Public Health Told By Motor Accident Toll

Much of the improvement in mortality from certain specific diseases was being nullified by the increase of traffic accidents. Dr. N. L. Brunette, Ottawa, told the Canadian Public Health Association, at its closing session of its 20th conference.

The problem of how to reduce the motor accident toll was so closely related to preventive medicine that the challenge put before public health officials to use their scientific knowledge to better conditions at their source must be answered. If that were not done, the purpose of public health—which was life conservation—would be thwarted, said Mr. Brunette.

The trichina worm, a hair-like parasite found in the body of human beings, pigs and rats, formed the subject of a paper by Dr. T. W. M. Cameron, director of the institute of parasitology at Macdonald College, Far from being unimportant, this worm in North American trichinae was a frequently occurring parasite. Its incidence in the United States was about 10 per cent, and in Canada 16 per cent.

The incidence of trichinosis pork was probably under three per cent, said Dr. Cameron. In neither Canada nor the United States was there inspection for trichinosis pork, but in both countries pork products were manufactured by packing houses under federal inspection and processed so as to destroy any trichina larvae.

The blue whale, caught in the Antarctic, measures up to 100 feet in length and is the largest mammal in the world.

A Chicago man caught a planet because he didn't like the music. May be a cruiser should be turned at the stake.

Easy To Locate

Dimed Engine Whistle Indicates By Note Where Trouble Lies

Engineers attribute the British motorized Queen Anne which dived at Saint John, N.B., have to know their music.

With diesel engines developing pressures as high as four tons a square inch, engineers must know when pressures reach the safety limit.

So, when pressure in the air-line goes past this limit a whistle blows and in order that mechanics may know in which part of the apparatus the danger lies, the whistle has different pitches for each part. One may emit a high note, another a low B, while rising pressures in another part of the engine-room will bring a mellow middle A.

It takes a lot of practice to get onto it, but the music takes the monetary out of the engine-room, says Chief Engineer A. Kearse.

Will Not Attend Unveiling

Widow Of Earl Haig Does Not Like Memorial Statue

London—Lady Haig, widow of Earl Haig, commander-in-chief of British forces in France during the Great War, announced she would refuse to attend the unveiling of the memorial to him in White Hall later this year.

"I certainly do not like the statue," Lady Haig said. "The house is monstrous. Also they have depicted my husband with a scroll in his hand. This is ridiculous. He always carried a map."

Controversy has raged about the memorial for years. Two previous designs were scrapped. Date for the unveiling has been set.

On the slopes of Mount Waialeale, Hawaii, there is an annual rainfall of 116 inches; the records show a rainfall of only 22 inches 14 miles away.

The note of bald or golden eagles weigh from 10 to 15 pounds.

Success Of Russian Girl

B.C. University Graduate Reads Paper At Chemical Association Convention

Following father's footsteps, 20-year-old Russian-born Olga Obukhova was born at Krasnojarsk, a city in Siberia, in 1912. Before she fled the country in revolutionary days, her father, J. K. Obukhov, was acting deputy minister of agriculture in the czarist Russian government.

The family settled at Abbotsford, B.C., in the lower mainland Fraser Valley farming area, where Olga went to school. She enrolled at the university in 1929.

The paper she read drew favorable comment from convention officials. B outlined methods employed at U.B.C. to propagate lactic acid bacteria—those that sour milk—on organic substances, treated with accurately known quantities of chemical foods.

Should Be Interesting A tableau depicting Vimy Ridge history and including a replica of Canada's Vimy Memorial will take to the Dominion for exhibition. The plan is to raise funds for the Canadian Legion.

The word caterpillar, translated literally, means "heavy cat."

Running in public is a crime in Japan.

Bears Out Prediction

Insidious Scientists Doing What Scientists Said Scientists Would

As far as the development of aircraft and the "art of doing things" is concerned, according to Vilshurum, Stefansson, explorer and scientist, Soviet Russia has left the United States far behind.

Mr. Stefansson, who travelled more than 20,000 miles by sled and dog team in the Far North in eleven years, spoke at the luncheon meeting of the Greater Buffalo Advertising Club. His topic was "Trans-polar Commerce by Air."

In citing recent advances of Russia in the field of aircraft, Mr. Stefansson pointed out that the Soviet has 10,000 men engaged in scientific work in the Arctic region, the recent establishment of a North Pole marking the 80th station, established by the country in the Arctic.

Showing slides and maps to prove that the shortest route from San Francisco to Paris is via polar regions, Mr. Stefansson forecast that the future will witness commercial air trails blazed in the North rather than in the tropical regions.

Russia is the only country capitalizing on the prediction that the Arctic will play a prominent part in aviation in a few years hence, the speaker pointed out that besides its army of men, the country has \$2,000,000 budgeted for scientific work in the Arctic and \$3,000,000 for survey flights.

In one of his books, Mr. Stefansson predicted that someone would spend an entire year at the North Pole. This particular book, he said, was published in 1922 and now he said that he had spent a national holiday on the part of Russia to-day bear out his prediction.

Accepts Big Assignment

Boy In South Africa Sends Monthly Dispatches To Canadian Editor

One of the world's youngest reporters has accepted one of the world's largest assignments.

John Kroll, of Cape Town, aged 13, who will "cover the whole of South Africa" by monthly dispatches to the Canadian editor, Grand Duke, who edits "The Daily Saturday Weekly" in North Vancouver.

This paper started three years ago and has proved such a success that its 14-year-old editor is looking for correspondents to supply him with "foreign" news.

There is a catch, however—though the newspaper prints advertisements, Kroll does not consider his financial status warrants paying salaries.

In his search for a suitable South African correspondent the life Canadian editor wrote to the Cape Town postmaster who passed the letter to the editor of the Cape Town Argus, who in turn gave it to John Allen, headmaster of a nearby school.

Allen offered the job to Kroll, who is a fair-haired, sturdy little boy, anxious to become an engineer.

He is considered a "good old round" youngster, but admits bashfully he does not always stand at the top of his class in school. He is taking his job seriously and is being initiated and aided in his task by none of the staff of the Argus.

Sufferers Exchange Letters

Girl And Boy Totally Paralyzed Meet Through Mail

A girl fighting for her life in an "iron lung" respirator in Winnipeg, Jean Woodman, 22, and a totally paralyzed American boy who has been putting up another battle for his life in an "iron lung" in Peking, China, Fred Smith, 25, have met by letter.

Reading about Smith in newspapers, the Winnipeg girl, in hospital since last September with paralysis, had her father write to the youth in China.

Letters from the boy's sister, Mary Loretta Smith, written to Jean, have brought pictures and news of the "iron lung" inhabitant.

Smith has completed a 12,000-mile trip from China to his Chicago home in the respirator.

Looks Like Hopalong Tank

Police of Burnham, England, are trying to find out if a short-legged "iron lung" inhabitant. Smith has completed a 12,000-mile trip from China to his Chicago home in the respirator.

He—if you refuse me I shall never love anyone else as long as I live. She—That's all very well, but suppose I accept you, what then?

Because it protects the skinwork from corrosion by acids in the lime-water used in extracting iron from bauxite.

Nutritive Requirements

Expert Dietitians Should Handle Food Problems

"Taking mother out of the kitchen and replacing her with expert dietitians in community feeding centers" was suggested by Professor James Luck of Stanford University as a possible means of securing "adequate degree" of nourishment in the western world.

The Food University of Toronto graduate, now associate professor of biochemistry at the California college, told delegates to the 20th annual convention of the Canadian Chemical Association at Vancouver that "more is known and put in practice in the nutritive requirements of chickens, cows and hogs than about the nutritive of humans in respect to rearing of infants and the maintenance of health."

He urged wider study of "nutrition" or, best nutritive requirements rather than the study of minimum needs which has obtained most attention so far.

He said that "at a price"—largely psychological—progress along that line could be made by "certifying" the licensed kitchen and directing to community feeding by public authority under the intelligent direction of experts in nutrition.

He suggested co-operative societies might organize satisfactory "community restaurants" with similar expert guidance.

Quoting statistics prepared by the United States bureau of home economics, Dr. Luck said:

"If the entire population of the United States were to receive a complete diet, farm to fork, it would have to be increased 70 to 80 per cent, over 1933 production. The national food supply would have to be increased to provide a liberal milk diet for everyone."

Dr. Luck coupled his address on nutritive deficiencies with a brief outline of "tank" cultivation of garden vegetables, which he said would have a widespread effect on public feeding and agricultural economy.

He said experiments at the University of California had made it possible to grow more plants to final fruiting stage in water treated with synthetic, chemical plant foods. Such foods, carefully regulated for nutritive value, would be used in controlled physical conditions, have produced tomato plants 25 feet high, yielding the equivalent of 400 tons per acre.

He said it was "not unreasonable" to believe the next few decades would witness revolutionary changes in market gardening, especially around large cities.

Make Vacation Profitable

Many School Teachers Combine Summer Course With Vacation

Classics with the double advantage of school teacher who, when vacation comes, may be tempted by the thought of a new term to start. Her species is extinct for the teacher of today billy packs per hour and solves away for the summer in Europe, where she combines study and travel.

Germany, Austria, Belgium, Czechoslovakia, Denmark, England, France, Italy, Germany, Greece, Holland, Hungary, Poland, Sweden and Switzerland, are now offering summer courses in some 150 schools and universities, and last year over 12,000 teachers headed the call and went abroad.

Summer courses in Europe are not usually given for credit; there are no entrance or final examination requirements and living in a foreign country and learning first-hand its ways and customs are considered just as important as academic pursuits.

Imported Canadian Ovens

First Shipment Was Sent To England Last Year

For the first time on record, Canada exported ovens to the United Kingdom during the last fiscal year, ended March, the Dominion bureau of statistics reported. The amount was 2,511 models valued at \$2,620.

New Zealand was the chief market during the year taking 94,640 models, followed by Newfoundland with 22,354 and Hawaii 1,560. Smaller amounts went to Bermuda, British Guiana and Panama.

The white potato contains of 70 per cent water, 12 to 15 per cent starch, 3 to 25 per cent protein matter, and a small amount of ash.

What's a cent way to turn the conversation when you had said, "There's a typical piece of driving by a woman," and it turns out it's a man?

The first known geographical dictionary is that of Stephanus of Byzantium, who lived in the sixth century.

WORLD HAPPENINGS BRIEFLY TOLD

An earthquake which witnesses said crashed strong walls and turned corners on church bellies shook the coast of Peru recently.

Russian Cossacks, former members of the White-Russian army, who took refuge in the Central European countries, have organized a circus troupe to earn a living.

The United States agriculture department estimated world production, exclusively of Russia and China, would increase approximately 200,000,000 bushels over last year's output.

Toronto city council approved a proposal calling for daylight delivery of milk. Under the new law no milk shall be delivered between 7 p.m. and 6:30 a.m. of the next day between Oct. 1 and May 1.

The silver mace of the old Irish House of Commons was sold at auction in London for £3,100 (£15,345). T. C. Henahan, acting for a Dublin bank, was the successful bidder in the auction held at Christie's.

The Duke of Kent saw his great-grandmother portrayed on the screen when he and the duchess attended the first performance in England of Laurence Housley's "Victoria Regina." Pamela Housley portrayed the queen.

No daily flights with both passengers and mail between the United States and Canada were scheduled to start on the Trans-Canada airway until 1938. J. A. Wilson, controller of civil aviation, announced at a luncheon meeting of the Canadian Civil Aeronautics Association, held in Regina.

Sir John Simon, chancellor of the exchequer, announced that the House of Commons Great Britain does not intend to re-open war debt discussions with the United States in connection with pending proposals for an Anglo-American trade agreement.

Interesting Comparisons

Between Speed of Road And That Of 40 Years Ago

The world was moving at a fast pace in 1868. Cy Warman made some interesting comparisons in "The Story of the Railroad," published that year.

On the team of Russell, Majors & Co., taking supplies to the army in Utah, less than a century ago, spent 20 to 30 days dragging the wagon from the Missouri river to Fort Kearney, 200 miles.

Mark Twain, traveling by stage-coach "at a dace and furious gallop," recorded that it took 100 miles from St. Joseph to Fort Kearney was made in 54 hours. John Butterfield's first transcontinental stage line, following a long southern route to avoid winter snows, carried mail from St. Louis to San Francisco in 25 days.

Then came the pony express, that one time carried news from St. Joseph to Sacramento in 10 days and 17 hours. The telegraph knocked it out after a few months of horse service.

Soon followed the railroad, and an early traveler records his amazement that the 2000 miles from Chicago to the crowning of the North Platte was made in 15 hours and 40 minutes.

The book of 1898 closes the record by noting that the "fast-travelled 300 miles" could then be made in six hours.

The modern streamliner train schedules Omaha to North Platte in three hours and five minutes. Meanwhile a regular passenger air liner has made a trip from Denver to Chicago in four hours and 16 minutes. Within the memory of our 7,000 surviving civil war veterans, Denver was more remote from Chicago than is Manhattan today—Chicago Daily News.

Had Bird On Camel

Amelia Earhart Putnam, American globe flyer, and her navigator, Capt. Fred J. Noonan, inspected Ketchikan, the gateway to Northwest India, from the backs of camels while their \$50,000 "Flying Laboratory" monoplane was being overhauled.

Butterflies and bees with long tongues usually avoid the simple tubes of flowers, where crowds of insects are visiting.

Britain's wealth is estimated to be £40,000,000,000. The average man's share is represented by the last 10 digits.

"Well, here's the same tramp I gave some pie to yesterday!" "Ah," said her husband, "they're hardened, these tramps."

The best throw that one can make with a die is to throw them away.

A sponger is a fellow with a proposition that won't hold water.

Become Star Salemen

Man Who Lost Part Of Brain Made Success Of Business

The case of an unsuccessful Chicago stockbroker who became a millionaire soon after a radical operation on the thinking center of his brain, in which about three-quarters of his left frontal lobe had been removed, described before the annual meeting of the American Medical Association by Dr. Ward C. Halstead, University of Chicago neurologist.

Mental tests for two years after the operation, Dr. Halstead reported, showed that the man had greater persistence, greater optimism and self-confidence and a lack of tendency to worry. On the other hand, the neurologist reported, the post-operative tests showed also a deterioration of the intellectual functions, particularly in the faculty of discrimination.

The stockbroker's wife told the physician that the only difference she observed in her husband after his operation was that he did not find fault as much with petty details, stopped worrying about the house and "can't drink as much as he used to be doing," going haywire.

Before the operation, Dr. Halstead reported, the man had been deteriorating rapidly and had failed in business. After removal of the frontal lobe he seemed to go through a period of insanity from which he recovered sufficiently to be discharged from the hospital.

The next heard from him was that he was "making a good thing." This venture failed, however, for no fault of his. He then "talked himself into a job" as salesman for a line of goods of which he knew nothing.

In his first week, Dr. Halstead reported, his sales amounted to a quarter of a million dollars, the biggest business ever obtained in a week by that particular company. This sales record continued until the company had to expand its plant and he was made vice-president.

Independent of the clinical and social recovery, the report said, a "marked residual defect was noted, particularly in the so-called higher mental functions."

For example, one of the mental tests given by Dr. Halstead consisted in giving the "word association" millimeter the task of crowing out each letter "v" from the pages of a book. The normal whole-brained person, tests have shown, would soon get fatigued and stop after doing, at most, five pages. The millionaire was still going strong after he had done fifteen pages and continued until the book was taken away from him.

British Settle Problem

Board Of Education Felt Sceptical Report On Homework

Few problems have been more debated than the "homework" for school children. As a consequence, foolish things have been said on both sides of the question. The British, in their characteristic way, have taken hold of the question, made it the subject of a report by the Board of Education—a report made out by teachers and inspectors. The report recommends that there should be no homework for elementary school children under 12, not more than one hour a day for those between 12 and 14, and 1½ hours for those between 14 and 16.

To the extent that it is possible to draw a line anywhere, this seems fairly sensible. It is not necessarily bad, of course, for a boy or girl to study in the home as well as in the classroom; sometimes, indeed, the work done at home may be more valuable.

It largely depends on the total number of hours worked, and also on the age of the child.—Ontario Journal.

Supply Exceeded Demand

Birds Worried Because Ice Cubes Free Too Fast

A frantic bird called the Rochester-Union and Electric Corporation to complain that her new refrigerator "freezes ice cubes too fast." Jack Sharkey, sales supervisor, said an electrician rushed to the scene and found ice cubes piled in every available pan, scattered all over the kitchen floor.

"I thought you had to take them out as soon as they froze," the bride told the electrician.

Greatly Surprised

Not so long ago motor cars in some parts of Ireland were few far between. An old farmer was astonished when he saw one gliding along the road without any visible means of locomotion; but when a motor bike followed it round a bend in the road, his eyes fairly bulged.

"Bogus," he remarked to his wife, "he'd a thought of that thing having a coil!"

Paper Changes Hands

Amalgamation Of Daily Newspapers

Change of ownership of the Quebec Chronicle-Telegraph, evening daily newspaper, from Hon. Frank Carrel, M.L.C., to "a syndicate of local businessmen" is announced.

The announcement, published in the Chronicle-Telegraph, says this paper will hereafter be published with the Quebec News, a daily paper which ceased publication on May 29. The name of the merged papers will be the Quebec Chronicle-Telegraph, Quebec News and Quebec Gazette, representing amalgamations in the local English newspaper field since the founding of the Gazette in 1764. Hon. Frank Carrel is a veteran Canadian newspaperman and has been an active journalist and publisher for 35 years. He inherited the Quebec Telegraph from his father, James Carrel, its founder. Mr. Carrel was born in Quebec in 1870 and was called to the Quebec legislative council in 1918.

Study Rheumatism

Survey Of Disease Carried Out By Department Of National Health

A survey of rheumatic disease in Canada has been carried out by the department of national health working in co-operation with an insurance company. Dr. R. E. Woodhouse, deputy minister, held a meeting of the Canadian Public Health Association. The results of the survey will be published later.

"This survey has given us some definite information on the per cent. of rheumatism by age and sex, the type of rheumatic disease by age and sex and the seasonal variation of the disease by severity," Dr. Woodhouse said.

"We believe the results will materially aid first the Canadian Rheumatic Disease Association and eventually the private practitioner in estimating various kinds of rheumatism."

Making Permanent Records

Toronto Library Plans To Photograph Newspapers For Files

Necrus newspapers being handled will not last more than 75 years. Toronto Library is planning to have such records photographed so they will last forever. C. R. Sanderson, chief librarian, explained citizens of the future who desire to see back files will be able to go to a booth and see the paper or edition they desire projected on a screen. Each page of the newspaper will be filmed on 16 mm. or 35 mm. film and a forty-page paper will be photographed on five feet of film. Three weeks' newspapers will be placed on 100 feet of film. The system would permit many savings, the librarian stated.

Lighting Bill Higher

Failure Of Moon Makes Difference

The town council of Stornoway, The Hebrides, is mad at the moon. It isn't doing lately, so the street lighting bill is up 10 per cent. Careful of their expenses, the council turn the street lights out when the moon alone brights the northern islands.

Now the entire Hebrides are threatening to get back to the American mainland on the following official announcement:

"The bad weather has deprived us of the use of the moon, practically throughout the season."

The state of Florida has 3,751 miles of tidal coast line.

Those with nothing to say usually take too long to say it.

BRITISH RIDER HAS SPECTACULAR CRASH

MAKE THIS MODEL AT HOME—BUTTONS ENHANCE ITS CHIEF

By Anne Adams

444

"Where there are bright buttons, there's a chic," says Anne Adams, and one look at Pattern 444 will convince you that, as always, she's up to the mark. It's a chic, simple, and signing you cheerily agree with her. It's a chic, simple, and signing you cheerily agree with her.

"It's a chic, simple, and signing you cheerily agree with her. It's a chic, simple, and signing you cheerily agree with her. It's a chic, simple, and signing you cheerily agree with her."

Must Conform To Standard

Ice Cream Sold In Canada Is Subject To Inspection

Ice cream may take an infinite variety of forms and colors, but it must conform to certain standards laid down by the Department of Agriculture if it is to be sold legally as ice cream.

Recent regulations governing this popular confection under the terms of the Dairy Industry Act have been announced at Ottawa. All ice cream sold in Canada is subject to inspection by government officers to determine whether it conforms to standards.

The small boy who risks a stomach ache by consuming immemorial ice cream cones at his Sunday school picnic may not know it, but ice cream is defined as the "frozen product made from milk products, with or without any of the following ingredients: eggs, water, sugar, harness flavoring, harmless coloring, and may contain added stabilizer or composed of edible material to the extent of not more than one half of one per cent, by weight."

The regulations further stipulate the ice cream must contain at least 10 per cent, by weight or food solids, and must be less than 13 per cent, by weight of milk fat. This milk fat minimum may be reduced to 11 per cent, if the manufacturer can show that his product is of superior quality and no artificial flavors are used as ingredients for flavoring.

The Newest Gadgets

Women Had Big Display At National Inventors' Congress

American women are making a strong bid for recognition in the field of invention. At the National Inventors' Congress, held in New York, more than 10 per cent. of the new gadgets were entered by women.

One of the new gadgets was a "N.Y. decided one day that she was tired of taking her friends to hold a party. She decided a year ago. She decided a year ago. She decided a year ago."

"She decided a year ago. She decided a year ago. She decided a year ago. She decided a year ago. She decided a year ago."

"She decided a year ago. She decided a year ago. She decided a year ago. She decided a year ago. She decided a year ago."

"She decided a year ago. She decided a year ago. She decided a year ago. She decided a year ago. She decided a year ago."

"She decided a year ago. She decided a year ago. She decided a year ago. She decided a year ago. She decided a year ago."

THE CANADIAN ADVENTURE TRIP OF BOB SIM, AN ONTARIO FARM BOY

No. 4 of a Series of 16 Letters

At least Bob is getting new visions of life in the West. Why people do not travel over more of this West and North, instead of reading away from it to "see something different" about the West, is a mystery. There's lots of variety in Canada, different climates, different life, sea scenery, food, to where you are. Bob's letter is an island; not a suggestion to readers. Well—here's Bob's story!

Buddick, Cape Breton, Nova Scotia. (Special Despatch by Bob Sim.)—After going east for two weeks I came to the end of land on the east-most shore of Cape Breton Island. At you look east there is nothing but water, and Labret or Liverpool—nothing but salt water. But there is, I can't say, a powerful lot of that. Bob's letter is an island; not a suggestion to readers. Well—here's Bob's story!

ASK FOR THE YELLOW BRIAR TOOTH PASTE

KEEPS TEETH SPARKLING

THE YELLOW BRIAR

A Story of the Irish on the Canadian Countryside

By PATRICK SLATER

By arrangement with Thomas Allen, Publisher, Toronto

CHAPTER VII.—Continued

"You are very backward, Paddy," he told me, "in your book learning. You are too talkative by far, and you are an annoyance to me in the school. I shall set you your tasks at home. You'd get, very little at the school, anyway. As well might I try making the stars out of the sky into my hand, Paddy, as try pointing stars into those under-hashes."

The first care of a boy like me, he told me, should be to think and speak his thoughts clearly in the simple words of the English tongue. And to do that, the boy must know what his words mean and be the master of many of them.

"I will have no gabble-gabs about Whittling Hill," declared Old Hickory Mick. "Tighten up the belt of your tongue."

The master put me under a tight discipline; and had great patience with me because he knew I was a foreigner, trying desperately to please him. Ten new fresh words a day—to taste them by rolling them on my tongue, to pronounce them aright, to know their precise shades of meaning, and to use them freely and naturally in conversation—that was my daily task. The whole matter I came to me now. The human brain cannot reason without words. A man can not pasture even on his own thoughts save with the use of words. In a year's time, I could quote almost every statement made by Christ on earth.

I was learning English grammar, not by committing stupid rules to memory, but by hearing the language correctly spoken. I could, in time, labor through the stilted, crabbed orthodoxy in the semi-weekly Globe newspaper; though I preferred greatly the new story of Dan-bey & Son, which was printed as a serial when not crowded out by sporting matters. While I was with Michael Hughes, I was carried on some way also into other things; and for a poor orphan boy, I have never felt that my education was sadly neglected.

"One does not get learning in a school for its own sweet sake," he said, "but one day, years afterward, as we were fishing in the creek for trout."

"All one gets there," he continued, "is merely the tools that enable the brain to work. Now I would have you change," he told me, after a sharp look at his line, "that fishing for these little trout is a real education for any person, young or old. The fisherman, as you observe, gets a splendid training in patience and perseverance. At the same time, the mind is getting a rest and is recreating itself. (Take about, you little fellow.) And such an education is practical because its rewards become gross and palpable in the frying pan. (Guilt wringing, my little beauty!)"

"It is possible, Paddy," he told me, "for the human brain to be so crowded with facts and the trifling gear of knowledge that no space has been left there for mass thinking to do some very great work."

THIS BACKACHE IS AN AGONY.

KIDNEYS WILL CAUSE IT!

GIN PILLS FOR THE KIDNEYS

What cure does one have both here and there of this year of sorrow? But oh, my bounding heart is glad To see you crown the table.

Dear fount of the nuptial seal, My father and my mother that, My upper coat, my lower vest, I'll hold you while I'm able!

Mr. Murphy, the tavern keeper, came in and spoke to me. "Faith hardly I'd be, little lad, if you could get Old Hickory out of the place and keep him away from the tavern forever. But I know the man. He won't budge out the door this night, unless he is thrown out. Run away home! The drink is already starting to gnaw at their insides; and they will soon be rough and quarrelsome."

One of the Irish kings from Adju Township was being sung Colleen Bawn. Michael was insisting that the man shut up.

"Have some of his friends come for him in the morning," Mr. Murphy asked me, as I set off for home. "It's a sick man they'll be finding!" Mr. Marshall sent the boys away over next morning to bring Michael back to Whittling Hill. The groans he was giving the men in the tavern. Hunched down in a chair, the man looked as weak as a wet rag. His face was chalky and dripping with clammy moisture. Mr. Murphy was coughing hot green tea into his rebellious stomach.

"Oh! have mercy! Woman, I am a sick man! Oh, God, I am a sick man!" he wailed, holding his pale, yellowed face, and retching without throwing up the rubbish.

"'Ever cry out, you scoundrel!' said his friends. "There's a husband who always finds his mother arse! Hear him cry!"

"You Michael got a swallow of tea down him."

"And you be up to your tricks again, too, Michael Hughes!" she warned him. "But don't be coming back here degrading a respectable public house!"

He bumbled Michael up and drove him home. Mrs. Murphy slipped on a small flask as we were leaving. "Don't let him see it or he'll scold the man entirely," said she. "But put a few drops into his tea and he'll be all right."

It was a miserable time the man had. He was purging for a week after the loss of the money, and Michael always came out of a debauch with a humbled heart and a chastened spirit. He consoled himself for a week after by reading the Georgics of old Virgil, and weaned me with the sound of his voice.

In the course of my duties at Whittling Hill, I got to know a lot about the people of the valley. I was not, of course, referring to the steady, state, daily drinking of hard liquor, which became a regular habit of the men, some of whom live to a great age and some to their graves as respected and respected members of their communities. A true history of the British Isles would demonstrate that the Irish are not a drunken people. A crown has been occupied, one time or another, by a gentleman who was a moderate drinker.

After twenty ounces of Scotch whiskey a day—generally in charge of armies in the first Judges of high appointment and high position, it is necessary to name them. My concern was not with a man who took alcohol in such regular doses that his body tolerated it as a food.

Michael Hughes was not a tippler. He never kept a drop of liquor about the house; and at ordinary times the very smell of it was unpleasant to his nostrils. The condition of his nerves seemed to create at intervals a craving which he fought for days, that which usually occurred. Like a journeyman barter of to-day, he usually held till Friday. And when he drank, he poured hard liquor down his gullet and irritated the nerves of a cross and empty stomach. A rebellion promptly broke out in consequence. Michael Hughes was a drunkard; and in the end, he broke his neck by falling through an open trap-door at a tavern.

He would have come to a end at an earlier date had Mrs. Murphy not given him some liquid courage. "Keep him away from here so long as you can," she urged me. "When you feel he is coming on, give him a spoonful of brandy into his tea. That will give him a false appetite. Then, when his thick peas are up and put butter into it with a heavy hand," the kind woman advised me. "I can't say a word of it on my belly lining can drink a whole company under the table."

Which I still think was expert and good. One must always have a good company under the table, and a good company under the table, and a good company under the table.

Blackheads on the face are a sign of a bad complexion. They are caused by a bad complexion. They are caused by a bad complexion. They are caused by a bad complexion.

Blackheads on the face are a sign of a bad complexion. They are caused by a bad complexion. They are caused by a bad complexion. They are caused by a bad complexion.

Blackheads on the face are a sign of a bad complexion. They are caused by a bad complexion. They are caused by a bad complexion. They are caused by a bad complexion.

Firestone

Make Use of Waste Gas

Can Convert Turner Valley Oil Into Fuel For Automobiles

Application of modern chemical knowledge can convert waste natural gas from the Turner Valley into fuel for automobiles and other industrial products with consequent increased production value.

Dr. A. Canham, of the national research center, of Ottawa, said: "Dr. Canham, addressing the Canadian Chemical Association's annual convention at Vancouver, said increasing demand for some of the products which can be derived from natural gas, and improvements in production processes, will 'probably make such a development profitable in the near future.'"

Only boosting the field and restricted coal markets has made chemical processing of the gas at Turner Valley unprofitable to date, he said.

Oak Trees Wanted

The local representatives of the empire planted 90 oak trees in Windsor Great Park as a commemoration of the coronation. The king himself planted the first tree. Hon. Viscount Massey, high commissioner, acted for Canada and Dr. Davies for Newfoundland.

Moon Turns Slowly

The long nights and days on the moon result from the fact that, as the moon travels around the earth, it turns very slowly on its axis. Thus, one side of it is exposed to the rays of the sun for a great length of time.

Bicycles are virtually a household necessity for young and old alike, where automobiles are banned.

Have Not Had Success

Party From Germany Travel Far In Search For Work

Two men and a woman sailed into Cape Town, South Africa, in their five ton yawl, after an adventurous voyage from Germany. Their food and water supply about exhausted, they are Frederick Bruggis and his wife, and Helen Matthes. Originally there were four, but one died of fever during the week coast. They left the Stella Maris had travelled 12,000 miles. The party set out with the intention of finding work in foreign countries, but so far have been unsuccessful, although they have been away from their country since August 1, 1933. They stayed at Angola six months hunting big game.

Cut Down Food Wastage

--- by covering all perishable goods with Para-Sani Heavy Moisture-proof texture will keep them fresh until you are ready to use them.

You'll find the Para-Sani sanitary knife-cutted carton handy. Or use "Centre Pull" Packs in sheet form for less exacting uses. At grocers, druggists, stationers.

Dr and Mrs Ward left last
Sunday on a motor trip to Ca-
lifornia. They expect to be
away a few weeks.

Mr and Mrs R Moore and dau-
ghters Misses Jessie and Jean
have been holidaying at Water-
ton Lakes for the past week.

Mrs Neils and young son, of
sorrow, Alta, are at present
visiting the former's parents
Mr and Mrs H Johnson.

Messrs Keith Ellis and Rease,
Buffield, of Turner Valley, spent
last week end here visiting
friends.

Mrs A McGimpsey has purcha-
sed from the town the vacant
lot immediately east of their
store.

Messrs Donald and Howar-
d Buffield motored over from
Washington last week-end and
spent a few days here visit-
ing brother Kenneth.

We understand the Broad-
way tennis club is contemplating
moving their court to the lot
just west of Mr McGimpsey's
store.

Owing to the increasing busi-
ness at the Dominion Gar-
ment Factory here, the company is
enlarging their office building
to accommodate the office staff.
